Scott Lawson

Welcome to June's Newsletter.

New Membership Benefits

With the start of the new membership year approaching on 1 July, I am pleased to announce the next addition to our membership benefits programme. This time, the association has negotiated a discount structure with Mobil New Zealand fuel cards. Our members can sign up for an account with Mobil and get 10 cents off per litre on the pump price. Full details are available on our website www.fireprotection.co.nz and in the following pages in the newsletter. This is a great offering, and we encourage you to take advantage of this and sign up.

We are also working on the launch of our FPA insurance scheme. More work remains to be done before rollout, but we're not far away from launching. This scheme will bring some great discounts and better levels of cover with fewer exclusions. I would like to thank those of you who helped with the data-collection process with Alan Wilson Insurance. This has proven our concept that our members will gain great benefits with an industry-specific insurance scheme.

We are also continuing other initiatives for membership benefits. It is an important part of helping create value as well as savings for our members to offset the investment of being part of the association. We continue to build on this area of our membership offerings.

New Members

I would like to warmly welcome the following new members to the association: Fireco, Masterguard Fire & Security Ltd, and UCS Passive Fire Protection. It is great to have new additions, and the added diversity within the association continues to improve our voice and standing within the industry and the marketplace. The wider our membership becomes, the greater our ability to negotiate additional membership benefits.

Ministry of Business, Innovation and Employment (MBIE) Working Groups

I would like to thank you all for taking the time to express your interest in the latest round of selections for the three new working groups on the MBIE Fire projects. The interest was very strong, and it was great to see so much interest in taking part in these groups. The calibre and sheer numbers of applications we received made the selection even more difficult. The selection committee—made up of FPA council members—reviewed the candidates and completed the selection process last

week. Unfortunately, numbers meant we were not able to put everyone forward; those who have been selected have been contacted directly.

The next stage: the MBIE is reviewing our nominations and will advise us if gaps still need to be filled or some areas are over represented.

We continue to assist MBIE by providing subject matter experts from within our membership, and the voice of the association and the collective fire industry is being heard at ministry level. The benefits of this continuing work, both to the association and to MBIE, cannot be understated, and I encourage you to provide input where you can.

We are also starting discussions with Standards New Zealand in relation to the updating of the following fire standards like : NZS4512 NZS4510 NZS4541. We will seek members' input in this process. Over the coming months, keep an eye on these monthly updates for information on how you can register your interest in having your say. As with the last selection, our process will continue to be transparent and open to all members.

Evacuation Consultants

Congratulations to Daniela Ward and William McClure from Fire Safety Net Ltd for completing their level 2, 3 & 4 certification. It's great to see people completing the formal certification process. We are increasingly contacted by building owners and other organisations looking for Evac consultants, and it's important that we can recommend qualified people.

FireNZ 2016 Call for Papers and Exhibitors

With the theme confirmed and our exhibitors' prospectus complete, we are making great progress with FireNZ 2016. The two documents available so far are as follows:

Call for Papers  [CLICK TO VIEW](#)

Exhibitors' Prospectus  [CLICK TO VIEW](#)

I would also like to confirm that the New Zealand Security Association (NZSA) will be joining the FireNZ exhibition this year. This will see our trade show/exhibition grow from 50 to about 70 booths and will undoubtedly result in additional foot traffic.

We are also working on a careers day on 9 November to attract people to our industry and help educate them on the jobs and opportunities possible within the Fire Protection industry. We continue to work on additional features and drawcards for the conference, so keep an eye on the updates each month, and don't forget to lock these dates in: 9-11 November.

Regards,
Scott Lawson
Executive Director, FPANZ

Event Schedule May - September 2016

13th June 2016	HOFFE Group SIG Meeting	Auckland
14th June 2016	Passive Group SIG Meeting	Auckland
15th June 2016	Evac Group SIG Meeting	Auckland
16th June 2016	Inspection Group SIG Meeting	Auckland
17th June 2016	Northern Region Contractors SIG Meeting	Auckland
20th - 24th June 2016	Get it Right Training Seminars	TBA
21st July 2016	National Council FPANZ Board Members Meeting	Auckland
15th August 2016	HOFFE / TRAINING Groups SIG Meeting	Auckland
16th August 2016	Passive Group SIG Meeting	Auckland
17th August 2016	Evac Group SIG Meeting	Auckland
18th August 2016	Inspection Group SIG Meeting	Auckland
19th August 2016	Contractors Group SIG Meeting	Auckland
16th September 2016	FPANZ Golf Day	TBA
9th - 11th November 2016	FireNZ CONFERENCE	Auckland

COMPETENCY BASED ASSESSMENT

Firetech offers competency based assessment (CBA) process to those who have been in the Fire industry for 5 - 7 years to achieve their National Certificate in a shorter timeframe, dependant on the technician's capability.

This is for all Installers, Testers and Inspectors of Fire Alarms, Sprinklers, Hand Operated and Passive Systems. Helps you get your IQP Status.

**Could this be you?
APPLY NOW – GET QUALIFIED**

For all enquiries please contact: Liza on 09 448 0434
or Jim Kelly on 021 560 161 | email info@firetech.co.nz

Firetech Training Limited
Providing Nationwide Education
& Training in Fire Systems

We continue to look for ways to add value to your membership and we are pleased to introduce this exciting new member benefit.

10 cents per litre discount off any displayed pump price on petrol and diesel with Mobilcard.

Key benefits:

Accepted at a wide network of Mobil branded service stations, all New World and Pak N Save unmanned service stations, as well as at Mobil fuel distributors Allied, Waitomo and Nelson Petroleum sites.

- **329 discounted Mobilcard acceptors sites throughout New Zealand. See www.mobilfuelfinder.co.nz to find a Mobilcard merchant near you".**
- **No joining fee.**
- **No annual card fee.**
- **No transaction fees.**

A vehicle consuming 100 litres per week using the Fire Protection Association discount of 10 cents per litre = \$10 discount per week

Total Discount = \$520
(52 weeks x \$10 per week)
including GST

For a company fleet of 10 vehicles that's an annual saving of \$5,200 per annum.

To secure this great offer or for further information, please contact:

Do we really Need Passive Fire Protection?

Passive Group Update

- Author **Ron Green** - Passive Group Chair

When conducting training on Passive Fire Protection I am often asked is Passive Fire Protection really necessary and is it ever needed? As an industry we have information provided to us about fires and associated fire saves, however the public is often unaware of the amount of fires that actually occur on a weekly basis.

Too often I have heard about fires that start from a commercial premises that unfortunately spread fire and smoke to other fire cells (in a few situations to accommodation above) due to no or incorrect fire stopping or lack of dampers. While no one was hurt in the fires on these occasions, property damage was an issue and smoke damage was significant. One client who engaged me to ensure the fire cell of his new tenant (Chinese Restaurant) was truly a fire cell had good reason.

In another building he owned there were three tenants with one of them being a restaurant. The restaurant had a fire and mainly smoke penetrated into the other fire cells due to very poor or no fire stopping of service penetrations through fire walls and floors. The smoke damage to both of the other tenants was significant and financial loss to the building owner was enough to make sure this will not happen again.

Too often when undertaking construction monitoring of Passive Fire Protection many people are too casual about what they are installing and don't appreciate that they are installing a fire safety system. While the above example did not include a loss of life other examples have had close calls and I certainly hope it does not take a loss of life to force significant change.

– Ron Green

Passive Tip

When installing fire stopping systems **read the literature and learn how the system was tested.**

The literature may state that sealant is to be installed around the pipe before a collar is installed to reduce the spread of smoke, or when using sealant it may state that the sealant is to be installed in between the cables.

Smoke can spread through poorly installed fire stopping systems like in the photo below which had a real fire on the other side of the plasterboard wall. While this may seem insignificant to some, with many penetrations like this, they will allow considerable amount of smoke through to another fire cell. If this is a rest home or hospital then it is even more critical.

HOFFE Group Update

- Author **Lance Hunt** - HOFFE Group Chair

Hello to the HOFFE Members.

May has been a busy month with the Fire Australia Conference and the FPANZ Council meeting in Christchurch.

The Fire Australia conference was early in the month and was an opportunity for me to meet HOFFE industry people there was a good representation both displaying and speaking at the conference. I look forward to our own conference in November so look out for more information in this month's newsletter.

The FPANZ Council meeting was an opportunity to further discuss the progress of the survey both Rob Saunders and Todd O'Donoghue were present and confirmed to council that the survey information report has the potential to have huge impacts in the market and also possibly in the legislative environment. Because of this it is important that the formal process of confirming and adopting this report is followed before any further actions are taken. While the formal adoption process takes time, ensuring it is followed will enable us to fully capitalise on the opportunities it presents to the industry.

We are expecting Todd to attend and update the SIG group on the progress, I encourage any industry people to make contact with me on mobile 021940516 or email Lance@safeworld.co.nz that want to get involved with the association and Special Interest Group.

Please keep sending in the survey forms in 2016 email to amelia@fireprotection.org.nz

The Code of practise for both the Hand operated firefighting equipment service contractors and the product importers was discussed at the FPANZ Council meeting on May 19th in Christchurch. The association's intention is to combine the survey findings, code of practise and

NZS4503 review into an educational tool for industry and present in a seminar format in 2016.

In regard to NZS4503:2005 we are calling for any interested parties in this review to confirm your interest to Amelia at the FPANZ email to amelia@fireprotection.org.nz we are looking to review the document and look at any amendments the industry would like to submit, any input from both members and non-members is encouraged.

The special interest group has its next meeting on Monday June 13th at 10.00am New Zealand Fire Service Headquarters Pitt Street, Auckland City.

Survey progress was a key point on the agenda and following a meeting with the New Zealand Fire Service (Todd Donoghue & Simon Davis) FPANZ (Lance Hunt & Scott Lawson) I am happy to say that the draft research project report is at the review stage with the Fire Service National Risk Reduction Team. Todd has assured FPANZ that the New Zealand Fire Service will keep us informed as to the process this document needs to take, see the update article from Todd in this month's Newsletter, Todd Donoghue will also attend the council meeting in Christchurch this month to update its progress. As the Special interest group chair I cannot stress enough the importance that the survey, Code of practise and NZS4503 Standards review will mean for this sector of the industry in 2016.

Regards,

Lance Hunt,
HOFFE SIG Chair

Evacuation Consultants Group Update

Author **Ela Langford** – Evacuation Consultants Group Chair

I hope my writing finds you all well.

I feel compelled to share a scenario and in doing so challenge the expressed opinion by some in the industry that Evacuation Consultants entirety of role entails to ensure everybody is out during practice runs, commonly known as trial evacuation drills.

This example in my observation is not an isolated incident and perhaps more common than we may wish to admit. It will assist in taking a look at the importance of understanding fire protection systems as an integral part in 'directing' the evacuation procedure.

The care facility houses occupants, dependent on staff assistance in the event of a fire outbreak. Residence will need help to evacuate to the next safe fire cell and/or via the nearest safe exit to a place of safety.

In this very well equipped and managed age care facility, two sprinkler heads located in a bedroom and adjacent to a final exit door required maintenance work. This resulted in the sprinkler head being 'clamped' in early 2016. Late May that year at the time of six monthly trial evacuation the clamps were still in place, long after the maintenance work had been completed.

People due to installed fire protection systems, existing fire evacuation and organisational procedures report to experience a sense of security. Additionally the expectations, that all together, and in its parts, everything works, fosters reliance and enables occupants to go about their daily life with reassurance. This in turn translates into greater confidence aiding safe evacuation in the event of an outbreak of fire.

So what happens when one 'small' change could change everything?

As Fire Evacuation Consultants do we consider it 'good practice' and are responsible to understand and advice the age care owner and/or manager accordingly to: the change-affect on the means of escapes and egress route? The need for an interim revised evacuation procedure, a risk management strategy and liaison with the maintenance agency?

Consider, as in this example, the existence of good fire protection systems, well thought through evacuation-strategies, and well-trained staff. The assumption of being well equipped to manage an emergency requiring evacuation is based on and in accordance to, that all active and passive fire protection system pertaining to the building are maintained and able to operate as to design to keep occupants safe.

This simple little clamp and the fact that it is attached to a sprinkler head in a fully occupied care facility, mostly unnoticed, will not disturb the occupant's sense of security. However noticed or not it impacts on the way how staff and residence would need to go about evacuation and manage that area of the building in the event of a fire is of considerable importance.

Is it reasonable to take the position that we are not IQP's nor are technicians and therefore leave it to those experts, deciding to make no mention of the change-effect of this little orange device to the owner and/or manger on discovering its existence?

How and if so, does duty of care and due diligence under the new Health and Safety in Work Act 2016, a reality for consultants working in this type of buildings with level 3 and 4, apply?

Luckily no fire outbreak occurred during that time of considered increased risk and the clamp was removed by the contracted agency on prompting of the care facility owner shortly afterwards.

I trust the next two scheduled technical sessions for 15th of June 2016 and 17th of August 2016 will be a treat and stimulate rich discussions. The presenters are: Todd O' Donoghue's speaking on "Evacuation gone right and evacuation gone wrong". He will be sharing his rich repertoire of NZ Fire Service experience in the June session. Nicky Vaughan will present in the August meeting on "Mitigation when selecting assembly areas" from her wealth of knowledge from a health & safety perspective.

I take this opportunity to thank both presenters on behalf of the SIG Group for offering to share their knowledge and in doing so enrich us all.

Ela Langford

Evacuation Consultants SIG Chair

Stephen Read - Elected Members Representative

"I started in the Fire Protection Industry with Wormald NZ in 1981 as a fire sprinkler designer, relocating to Wormald UK in 1987.

From 1991 to 2014 my focus has been Project Management and design whilst also progressing to various senior management roles in NZ and UK including; Contracts Manager, Small Works Manager, Regional Manager, Operations Manager, Sprinkler Manager, Northern Installations Manager.

My current focus is design as the national FP team leader working for NZ's leading engineering consultancy (Beca) - my current position is very diverse and rewarding.

FPANZ Team-Up Calendar

We now have a great new online calendar system for keeping an eye on events that are relevant to our industry and FPANZ.

This can be accessed a number of ways, from our website, or from the link below, or you can even subscribe to the ical links below and your own calendar will be updated with the events and changes if you subscribe to them.

Presently we have four calendars the web address to view them online is:

Creative Installations

Author **Stephen Ridder** – Aon New Zealand

We see many interesting installations of product being used outside of the application for what they were designed. While it may seem a good idea at the time, and solve a problem, there may be unintended negative consequences. In some cases it will only be when there is system failure or system activation that the application will be shown as deficient. Supervisors need to be careful that product they are sourcing is suitable for our industry and is being used for the intended purpose.

Over size twist clip. This clip is one size bigger than the pipe. As a result the clip is not tightly holding the pipe. This means the pipe is no longer restrained longitudinally and potentially may shift. Same also applies when pipe clips aren't the correct size.

Wrong bolts. Bolts are meant to extend beyond the nut by at least two threads. Using bolts that are too short risks the joint bursting. Rubber "doughnut" joints also need longitudinal restraint.

Flexible dropper used as seismic joint. There are two problems here. Firstly the losses though flexible droppers are significant; did the designer build those into their design? Secondly flexible dropper are only designed and tested for

a small amount of deflection under pressure; will the flexible dropper break during a seismic event – who knows? We also note that the right hand side of this assembly is not restrained.

Strap bracing isn't a pipe hanger.

Flexible droppers are supplied with ceiling brackets for a reason. Pipe clips and saddles don't grip the dropper properly, as a result the sprinkler doesn't sit in the ceiling correctly. We don't know if the sprinkler will stay in place if it discharges.

PTFE Tape Usage

Author **Shane Grant** – Fire Systems Inspector, Aon New Zealand

While I was running around Auckland doing inspections I came across this in the valve room.

This was at a site that had just had a very recent upgrade to ESFH. My understanding is that the correct usage of PTFE Tape is to only wrap the tape around the threads 3-5 times for it to work correctly. Is this something we should be watching out for? The manufacturer instructions say to use "a small amount of tape" when installing Generally when this much tape has been used they are trying to stop leaks, I was under the impression that most leaks on these styles of heads are due to incorrect installation, over torquing, or not using the correct spanner and damaging the Head?

All sprinkler manufacturers recommend a maximum torque that sprinklers can be tightened too. Overtightening a sprinkler can lead to leakage, or even catastrophic failure.

Building and Fire Services

- Dedicated to providing professional advice and efficient service.

Building and Fire Services are proudly based in Whangarei, Northland and were founded in 2008 by Mike Lindsay. They have a well-established customer base, built upon a great level of communication with clients and dedication to providing professional advice and efficient service in Fire Safety and Compliance. The team have the edge when it comes to Building and Fire Protection Services with well over 20 years' experience they are not only knowledgeable but truly passionate about Fire Safety.

Their mission is to provide specialised services, which now include online training, that focus on safety and reduction of risk to people and property. They work alongside the Fire and Safety Industry to develop innovative training strategies, such as their new online training, that can be delivered to all workplace environments at an economic and functional level.

Mike and the team aim to achieve absolute client satisfaction

by delivering expert service and training that will assist organisations and staff in all areas of Fire Safety.

Look for contact detail in the advertisement below.

Services: Nationwide

- Online Fire Suppression, Fire Warden & Emergency Procedures Training

Services: Northland

- Building Warrant of Fitness (BWOF)
- Fire Safety Reports – for building consent application
- IQP Inspections – monthly, annual and on behalf of owners
- Fire Alarm Inspections and Surveys
- Passive Fire sealing
- Commercial Consultancy and Property Fire Safety Inspections
- Compliance – advisory services
- Fire Equipment Servicing

and receive a 20% discount off your next online training booking**

6 ADVANTAGES OF ONLINE TRAINING

with Building & Fire Services (2008) Ltd

Fire Suppression, Fire Warden & Emergency Procedures

The online training contains the following content:

- Specialised content, relevant New Zealand images, symbols and standards that relate to your workplace or home safety, all prepared by fire industry experts for New Zealand use.
- A variety of 3 different training packages to cover your needs.
- Proven training materials and content used for over 9 years.

1 Scalable, efficient and fast

Customise your LMS to suit your team. Results are tracked and reported back to employers. Trainees receive certificates upon completion.

2 Capacity and consistency

High levels of coverage ensure message communicated is consistent and all learners get the same quality training.

3 Higher learning retention

Caters to various learning styles. Ability to update course materials when required. Self paced learning to suit your team.

4 E-Learning saves time and money

Reduces time away from workplace, cuts down on travel expenses and reduces training costs.

5 Reduce your carbon footprint

Viable alternative to paper-based forms of learning and testing. Workbooks and materials can be stored electronically for future reference.

6 Flexibility and accessibility

Freedom to learn where and when you want, at your own pace. Accessible from mobile devices.

Calling all Halon Fire Extinguisher Owners

FPANZ is promoting awareness around Halon fire extinguishers and wants to recover these from the commercial sector and from private owners.

Halon has fallen out of favour due to its environmental impact and long atmospheric life time. It is considered to be a potent greenhouse gas and contributes to ozone depletion. However, safety is the main issue as servicing of Halon extinguishers has not been available since 1998 when the production of Halon was banned under the Montreal Protocol.

Over the previous ten years, more than 60 tonne of Halon has been recovered by FPANZ members and this was sent for safe destruction. It is estimated that a further five to ten tonne is still in use. This needs to be recovered now as any unit still in use will be well over ten years old and will not have been serviced.

"Fire extinguishers, just like smoke detectors, need to be checked by a certified agent annually" says Blind

"We do have fears that Halon extinguishers, due to this lack of servicing, may fail to operate correctly in the event of a fire. We are prompting all members of the public to check their boats, cars, workshops, caravans and planes to see if they still have a yellow Halon extinguisher and to exchange this for a unit coloured red".

"There will be a cost to change, however both the public and the environment will benefit as we can be sure new systems will operate correctly in event of a fire and the impact on the ozone layer will also be reduced" says Blind.

There are now many suitable and cleaner alternatives available and FPANZ members located nationwide will accept Halon units and provide information on the safer alternatives available. Halon extinguishers are easy to identify as they are bright yellow. Replacement units will be coloured red.

"We look forward to gathering as many of the remaining Halon systems and hand held fire extinguishers here in New Zealand and to have the contents safely destroyed" says Blind.

"We will also have greater confidence that owners will be protected in the event of a fire and this will ultimately protect lives".

Our message is: "Be Safe Yellow is Out – Red is In!"

For further information check the FPANZ website for a certified agent near you:

<http://www.fireprotection.org.nz/>

Yellow extinguishers, Halon extinguishers, are so old – if you have one, the chances are they will let you or your family down in a fire.

Halon damages the ozone layer which in turn can affect our health, causing skin cancer, cataracts and other illness as well. Damaging the ozone layer can also impact on our weather, our soil and our crops.

Protect yourself, your family or business, by handing in your old yellow extinguisher. It's easy to do – simply take it to the nearest local approved Fire Extinguisher Service Agent. A list can be found at www.fireprotection.org.nz

YELLOW IS OUT
RED IS IN

While there, talk to these experts about your needs and how best to protect against fire, including alternatives such as a red fire extinguisher*, a fire blanket, a smoke alarm, and other effective choices. Often a combination is the best approach.

So act now and hand in your old yellow extinguisher. It's a service for the general public and small businesses. A small recovery charge will be set at \$10 per kilogram (up to a maximum extinguisher weight of 2.1 kg in size). A Halon extinguisher larger than 2.1kg is considered a commercial size and will be disposed of at a quoted rate.

**There is more than one type of red fire extinguisher on the market. Ask which one best suits your needs.*

For more information

call FPANZ on 09 414 4450 or visit us at www.fireprotection.org.nz

Graham's View

I've often said that the success of the Charter is down to the fact that it is industry-led; that as creators of risk, industries lead the charge in managing those risks.

But what we don't often acknowledge is the important role government plays in supporting safer and healthier workplaces. Right from the outset, the Charter has enjoyed support from a whole range of government agencies – all with the collective goal of rebuilding Canterbury safely.

Two of the Charter's biggest supporters have been WorkSafe and ACC. Both agencies have responsibility for workplace injury and harm prevention and the Charter has provided them with the opportunity to engage with local industry, to implement programmes and to drive improved H & S behaviours.

Worksafe and ACC are now partnering for injury and harm prevention right across New Zealand. The Reducing Harm in New Zealand Workplaces Action Plan will be released in July; it's a suite of cross-industry initiatives focused on areas of highest risk for fatalities, severe injuries and poor work-related health outcomes.

The Plan is very much a response to the Government's 2013 'Working Safer' blueprint, which identified problems in New Zealand's workplace H & S system, including a lack of collaboration and coordination between agencies on harm prevention. As industry representatives, I'm sure we've all had experience of this, but this Plan will enable us all to be clear on what is being delivered and why; what our role is in creating and maintaining safe workplaces and how these actions fit in with the wider workplace H & S landscape.

Finally we have a much-needed framework for targeted, evidence-based injury and harm prevention interventions that will have a measureable impact on health and safety outcomes in New Zealand workplaces.

As Charter members, we're used to seeing Worksafe and ACC working together. This Plan will work for the rest of New Zealand because the benefits of this partnership approach are already evident here in Canterbury.

Graham Darlow | *Charter Steering Group Chair*

New, improved charter out soon.

We're pleased to report that we're close to finalising the new 'Charter' and will officially launch it, along with revised material at the next Charter event on 29 June.

The Charter has been revised in light of the Health and Safety at Work Act which came into effect in April this year.

While it has a similar look and feel, it has been updated to include some new Commitments such as Upstream and Downstream Duties while merging others such as PPE and Site Safety Risks.

There are also several new Critical Risks, to align with the new legislation and also the risks being faced on sites across the rebuild.

We'd like to say a huge thank you to those signatories who took the time to comment on the new Charter – your feedback is crucial to its success.

We look forward to introducing you all to the revised Charter and providing you with updated collateral on 29 June.

CHARTER NEWS

CHARTER NEWS

Charter Chair takes home a top award at Safeguard

In very exciting news, our Chair, Graham Darlow has taken home the Executive of the Year award at the Safeguard awards on Wednesday night.

We're thrilled Graham has been recognised for his work, not only with the Charter, but also as the Chief Executive of Fletcher Construction and his work in Canterbury.

When handing out the award, sponsored by a Charter endorsee, the Business Leaders' Health and Safety Forum, the judges noted Graham's role in leveraging Fletcher Construction's role in post-quake Christchurch house repair to lift H&S standards among subcontractors.

They also remarked on the opportunity he took from Canterbury to work to raise standards in the residential section nationwide.

We've also simplified the Charter collateral material which should make it easier to find what you want and download it easily. There's also a new News & Videos page where all our event videos and material will now be listed in chronological order.

Well done Graham!

We'd also like to mention Jules Fulton, from Fulton Hogan, who was also nominated for the same award. Fantastic to see two of our top leaders in the finalists for this category.

Helen Kelly recognised for 'tireless work'

We were delighted to see former President of the Council of Trade Unions, and former Steering Group member, Helen Kelly, honoured at the awards – winning the Countdown Lifetime Achievement award.

The Judges noted Helen's tireless commitment to making sure people are safe at work, using all the tools at her disposal – from the judicial system, to Twitter.

We all know how passionate Helen is on H&S – and she has made a big impact on the Charter during her role as a Steering Group member.

Helen Kelly being presented with her award.

Graham Darlow with George Adams, Chair of the Business Leaders' Health and Safety Forum, who presented the award to him.

Fulton Hogan has big presence at awards

As well as being nominated for the Executive of the Year award, Jules Fulton's organisation was also nominated for four other awards on the night!

They did take home the Best initiative to address a safety risk award for developing two sophisticated mobile driving simulators to address the vehicle crash rate.

And the nominees....

And we cannot forget the significant number of signatories who were nominated for awards. Well done to you all for your efforts in improving Hands in your industry. The following signatories were nominated for awards:

- Alcohol and Other Drug Construction Project – the Vitae Best initiative to improve employee wellbeing award
- The Canterbury District Health Board – nominated for the Vitae Best initiative to improve employee wellbeing award
- AGL Scaffolding and Rigging – nominated for the SiteSafe Best health and safety initiative by a small business award
- Men at Work – nominated for the SiteSafe Best health and safety initiative by a small business award

Well done.

Developing your AOD Policy – Register Now

Last month we launched the Charter's Alcohol and Other Drugs (AOD) factsheet – which included a step-by-step guide on how to introduce an AOD policy into your business. WorkSafe is now hosting a trade breakfast on AOD on **Thursday 16 June**.

Presentations include why AOD is such an issue in construction, how to go about introducing an AOD policy on your sites, and detailed information about random and pre-employment testing. Register here for the event which runs from 7-8.30am on the 16th.

CHARTER NEWS

Orientation sessions a huge success

Following our first Charter orientation session in late April, we've now run three 2-hour sessions, with a waitlist for more.

The free sessions are not just for new signatories, providing a great refresh on the resources available to you as Charter signatories, and one-on-one support with your Assessment tool.

Feedback from signatories has been great: "Fantastic discussions in the group activities." "This has been a great start and knowing there are plenty of resources available is a great relief."

"Love the website, the first time I have seen a tool that has such potential to give some really straightforward guidelines and ways to measure your performance in conjunction with the ability to make notes and put the information straight into a document to show what areas you can improve and what you need to do."

The sessions offer:

Practical steps to help your organisation understand and meet the Charter commitments and actions – this will also help you comply with the new Health and Safety at Work Act.

A run-through of the online Charter tools including the organisation assessment tool, the performance improvement plan and the personal leadership tools. You will be able to begin using the tools and stay on for another hour to complete them with support if you wish.

An overview of the resources available to you as a Charter signatory such as toolbox talks, factsheets and guidelines from other signatory organisations – we'll have plenty for you to take back to your sites too.

These sessions are open to others in your organisation with an interest in health and safety, in particular we recommend them for other senior leaders responsible for your organisation's health and safety in Canterbury.

Following this session, you'll be well placed to drive improvement in your organisation's Charter performance and the development of health and safety leadership, through the organisation.

Each session will run for 2 hours from 0700 -0900 with breakfast included from 0645. You will be able to use this session towards your Licence Building Practitioner (LBP) points. Computers will be provided for you to use on the morning and you will be able to save your work if you wish to complete assessments at a later time.

The orientation is facilitated by Libi Carr – she is looking to run another session on 22 June, so if you're interested email her at libi.carr@safetycharter.org.nz to secure your place.

We look forward to seeing you at an Orientation session soon!

COMING UP:

Managing Alcohol and Other Drugs (AOD) in construction

AOD can have a significant impact on workplaces, and this event will help you to understand why it is a risk, particularly in construction. At this event health professionals and rebuild leaders will talk you through developing an AOD policy for your organisation and how to go about pre-employment and random AOD testing on site.

There will be information from AOD testing and support providers available at the event.

When: Thursday 16 June

Where: Rydges Latimer, Christchurch

Time: 7.00-8.30am
(Breakfast open from 6.30am, presentations begin at 7.00am)

RSVP: Please [click here](#) to RSVP online by 3 June 2016 (Please note, registrations are limited to five people per organisation)

16
JUN

Quarterly Charter Members' Event

The theme for the June Charter Members' event is: International Alcohol and Drug speaker and new Charter launched. We will have a presentation from international expert, Professor Ann Roche from the National Centre for Education and Training on Addiction in Adelaide.

There will also be a presentation from WorkSafe and ACC on the Reducing Harm in NZ Workplaces Action Plan.

When: Wednesday 29 June

Where: Addington Raceway

Time: 5 - 7pm

Invites out soon!

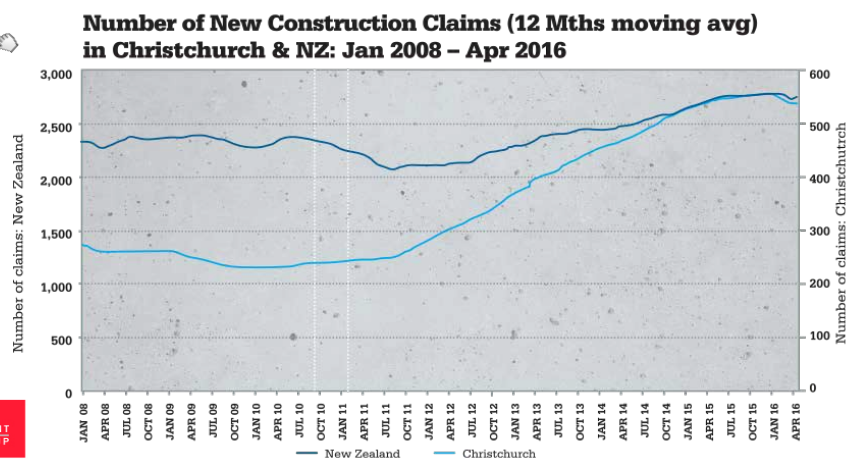

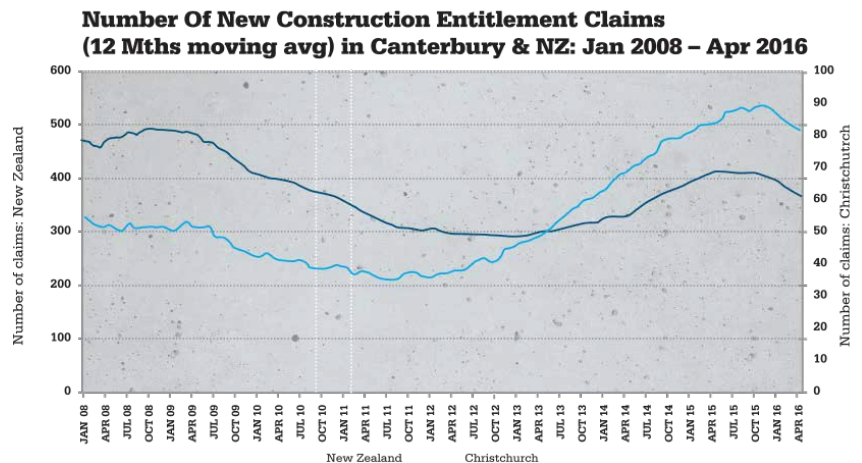

29
JUN

ACC Data Update

New construction-related claims in Canterbury decreased again in April – 538 claims lodged compared to 542 in March 2016. Those claims that become entitlement claims – that is where a person requires more than 5 days off work –also decreased (82 for April cf. 84 for March). The average cost of claims in the first 12 months post-injury was \$1948.

In March 2016, the average number of new construction claims registered with ACC over the last 12 months was 540, which is down by 1.8% when compared to the 12 months moving average number of new construction claims on February at 550.

Click [here](#) to read the April 2016 dashboard.

WELCOME ABOARD

A warm welcome to our newest 'batch' of Charter signatories:

We now have 323 signatories and endorsees – so thanks to everyone who has supported, nominated and challenged other businesses to sign up for safety!

JOIN THE SAFETY CHARTER.

The Canterbury Rebuild Safety Charter is an agreement on health and safety between the leaders of a number of government organisations and companies leading the rebuild

The aim is simple – to get every worker home safely every night.

We strongly urge you to sign up to the Charter, because you will:

- ✓ **Improve the health, safety and wellbeing** of your workforce, your colleagues and the industry as a whole
- ✓ **Receive support from industry colleagues** to help improve on-site safety
- ✓ **Receive practical ideas, case studies and lessons** to help your company and sub-contractors
- ✓ **Have access to Safety Charter events** featuring key speakers and players in the industry
- ✓ **Use the Charter Assessment tool** with its detailed guide and aggregated results of Charter signatories
- ✓ **Make a public commitment to health and safety**
- ✓ **Boost the reputation of your business** through your commitment to the Charter.

Fire Safety isn't something you would take a gamble on, is it?

Next time you need advice, servicing, installation, or fire protection products, there's a simple way to ensure you are dealing with professionals with the relevant training, knowledge, ethics and responsibility critical to the safety of lives and the protection of property.

The way to ensure you are not taking an unnecessary gamble with lives, property, or fire safety is to **choose a member of the Fire Protection Association of New Zealand**.

FPANZ members are proud to belong to an Association which:

- Sets the standards for the Fire Safety Industry in New Zealand
- Ensures its members operate to professional Codes of Practice and Ethical Conduct
- Pursues continuous professional development for members and their staff
- Has established high-level formal relationships with the New Zealand Fire Service, Government agencies, International Fire Associations and the wider community
- Is active in the ongoing development and review of Fire Codes and Standards.

The Fire Protection Association of New Zealand (FPANZ) is a not-for-profit Incorporated Society governed by a constitution and Board of Directors, with its national head office based in Auckland. The Association is the voice of the industry and responsible for these key areas in the industry:

Code of Ethical Conduct

Under the Association's constitution, all members and companies are bound to the Code of Ethical Conduct. Our members are committed to operating to best practice, and are accountable to the Association for their performance. All members are subject to a fully-documented complaints and disciplinary procedure.

Vetting

All prospective new members of FPANZ must supply detailed information on their company, staff and market activities, including customer references. Additional background checks are also done, then all information is reviewed by the Board of Directors to establish that the applicant meets the requirements to become a member of FPANZ.

Insurance

One of the other benefits of dealing with a member of FPANZ is that all members must carry a minimum of two million dollars in public and product liability insurance.

Promoting Industry Training and Education

The Fire Protection Association of New Zealand works closely with key stakeholders: Competenz, FireTech, and its members to ensure the industry is providing continuous industry development and relevant training to staff.

Special Interest Groups

FPANZ Special Interest Groups (SIGs) provide a forum for sub-groups of members to keep abreast of the latest issues affecting their particular discipline, and to ensure that sector-specific issues and concerns are addressed in a timely and professional manner.

For more information or to confirm if your Service Provider is a FPANZ Member, visit our website www.fireprotection.org.nz

or contact: Fire Protection Association NZ, Phone: +64 9 414 4450; Email fpanz@fireprotection.org.nz

To make sure you're not leaving it up to a game of chance, ask your service provider if they are a member of the Fire Protection Association of New Zealand.
