

Commentary

Scott Lawson

Welcome to December's Newsletter.

Like most of you, the association has experienced a flurry of activity over the last couple of months, so as the year draws to a close, I would like to take the opportunity to provide an update on some of these.

SIG News

As most members will be aware, we recently put all SIG Chair positions up for election. While this process highlighted some minor gaps in our constitution, overall the process was fair, and we will look to fine tune the constitutional gaps early in the new year. The outcome of the elections has placed four new people into the following positions: HOFFE SIG – Steve Smith; Contractors SIG – Kiran Soma; Evac SIG – Phil Jackson; Passive SIG – Paul Ryan. I welcome them into their respective positions and into the national council. These members represent the SIGs at a council level to affect association strategy and direction.

I also make special mention of the following outgoing SIG Chairs. HOFFE SIG – Lance Hunt; Passive SIG – Ron Green; Evac SIG – Ela Langford. These people have worked hard and collectively donated many hours of their own time over the past few years to help drive the values and directions of the SIGs. On behalf of the association, I wish them well and am very grateful for their support. I look forward to them continuing as active members of their respective SIGs.

AGM

We held our AGM on 14 December. This was a great opportunity to provide an update on the affairs of the association and our strategy and goals for the next year. The timing of this year's AGM was dictated by a number of events, including our annual audit being delayed and FireNZ, that pushed it out to a very busy time of the year, so I thank the members who were able to attend. My intention is to hold the AGM earlier next year to help make it accessible to more people. The annual report is available to all current financial members of the association.

Council Voting

This year, two council members completed their 2-year terms on the council. I would like to take this opportunity to thank Geoff Willis and Les Mellars for their considerable contributions over the years. Both

Geoff and Les will remain active contributors within the association via involvement in their respective SIGs. The council is an important part of the association and provides strategic direction, so it is important we have a wide and varied selection of people filling these roles. This year, four people were nominated for the two vacancies. The two elected council members are

- Bryce Donaldson
- David Prosser

With these new faces, the council has changed considerably. Please see the updated full board and council listing on page 12. Next year, we will also continue to introduce the new council members to you.

FireNZ 2016

The partnership between FPA NZ, the Institution of Fire Engineers – New Zealand branch (IFE) and the New Zealand chapter of the Society of Fire Protection Engineers (SFPE) continues to help grow FireNZ, which unifies the whole fire protection industry once a year, an occasion seldom replicated elsewhere in the world.

FireNZ has continued to grow year on year. 2016 was no exception, and we broke several records: the trade show footprint increased from a previous best of 46 spaces to 70, including the addition of ten from the New Zealand Security Association (NZSA). The conference event also expanded to a 3-day programme to enable us to fit

everything in. We also ran a careers event as part of the conference, with the aim of attracting more youth to the industry. This was a great success, and we plan to repeat it next year.

I take great pride in the growth of FireNZ, and industry support is greater every year. The more support it gets, the more it delivers back to the industry. I would also like to highlight that we are booked in again for next year on 11–13 October at the same venue – ASB Showgrounds, Greenlane. This gets us back to our usual timing slightly earlier in the year.

Welcome New Members

I would also like to welcome the latest new members to join our association. It is great to have more members on board continuing to grow our voice, expertise, and membership base.

- Contego
- All About People Ltd
- Siemens (N.Z.)
- The Fire Guys Ltd
- Passive Fire NZ Ltd
- Stephen Bradburn from Simplyfire Ltd
- Craig Boyd from Autodor
- The Connect Group

In closing, this has been a very full year at the FPA; it has included a number of challenges, and there are many more to go. However, it is pleasing to see the great progress we have collectively made. This includes our relationships with our key stakeholders – MBIE, the New Zealand Fire Service, Competenz, and BRANZ, to name a few. The FPA brand has grown as the true voice of the Fire Protection industry, and we held another very successful FireNZ conference and trade show. We developed a gaseous suppression code of practice, made some back-of-house changes, continued to develop our CRM system and accounting processes, and undertook governance reviews. All in all, the association has made some really positive progress, and I look forward to this continuing this trend next year.

I wish you all the very best for the festive season and hope you are all able to take some time to relax and enjoy it with your families. Have a safe and enjoyable holiday.

I look forward to being in contact again next year.

Regards **Scott Lawson**
Executive Director, FPA NZ

Passive Fire Protection Update

- Author **Ron Green** - Passive Group Chair 2016

As we reflect back on the year the Passive Sig has had great attendance at each meeting and collectively spent many hours inputting into improving the industry.

In the past year, we have focussed on the following three goals:

- Training for FPA members - this consisted of two hand on practical seminars
- BRANZ Passive Guide –our team have spent many hours proving feedback to BRANZ for a document that is intended to assist the industry. We certainly hope our input is taken on board and the document is practical.
- MBIE Passive and Construction Monitoring Review – This is a great opportunity for FPA to have input into the future of what Passive may look like from new installation point of view and post construction (BWOFF Process).
- Education by Passive Tips

The focus of the group has primarily been on fire stopping of penetrations through fire separations, however other areas of passive fire protection e.g. steel protection. This is also an area of concern from what I observe during construction monitoring and next year the SIG needs to review how all parts of Passive Fire can be included.

Passive Fire Protection is one of those areas that does not receive the attention it deserves particularly from an installation point of view, as there has not yet been a disaster that forces change. We are certainly hoping that the proposed actions of the MBIE review will eventually change the way Passive is installed, monitored during construction and checked during the BWOFF process.

- Ron Green

Passive Tip of the Month

Design and Build not Build and Design

It was mentioned as part of the MBIE review that often we Build and Design not Design and Build. That is so true when it comes to Passive Fire Protection. Too often the tradesman is handed a fire stopping solution by his supervisor which is totally incorrect. e.g. incorrect sealant for a bunch of cables. Because the tradesman has not been trained in passive fire protection he (*often he!*) just does what he thinks best which is often incorrect.

If you are required to undertake any passive fire protection work then ensure you design then build as building and then trying to design will ultimately result in additional costs to get it right.

WANTED: Fire Alarms Installations Estimator/Project Manager - WELLINGTON

Wormald Wellington is looking for a motivated individual to work within the Fire Sprinkler Service team as the Installations Estimator who has project management experience or capabilities as well as supervisory experience.

The successful applicant must have relevant previous experience within the fire sprinkler industry as the applicant will be responsible for defect quoting, technical support, timely completion of various Fire Sprinkler related jobs as well as the management of various minor projects. Working together with the supervisor to bring the project in on budget and to a fixed timeline.

This position involves the daily estimating of the service work and meeting customer expectations while making sure all team members are fully booked.

Experience in project management would be a huge advantage as you will be required to manage site personnel to ensure projects are financially sound through cost effective purchasing, allocation of resources and effective handling of variations.

This position has a number of measured KPI so you must have excellent time management skills as well as personal skills to maintain and increase the current team and position.

Together with a professional attitude and excellent communication skills, you will have a good work ethic and a desire to work as part of a team as well as a current driver's license.

This is a full time position which will require motivation and dedication to be part of an excellent team.

For more information or to apply please send your CV to and cover letter to NZ Human Resources Manager at dabarlow@tycoint.com

A tyco Business

Light at the end of the tunnel!

Author **Paul Ryan** - Passive Group Chair 2017

Firstly, I would like to thank Ron for all his hard work over the last few years as the Passive Special Interest Group Chair – he has been a huge influence in raising awareness of the problems we face in our industry!

I think its fair to say that the message has really been driven home that many of our commercial properties suffer from passive fire problems, there is a lack of passive awareness during the construction process, many manufacturers information needs to be more detailed to save confusion and there should be allot more industry input at design stage.

The message has hit home!

Going forward – I think its essential the industry moves to more positive ground and starts addressing the issues and provide a way forward!

In my opinion, the biggest problem we face is direction and guidance, inspectors, architects, installers all have little to no guidelines to work too - what is reasonable and unreasonable to expect – what is their scope of responsibility and expectation?

Currently we have a building code which details a standard products should be tested to – and that's about it!

I witness tension at site level on an almost daily basis – fire engineers, architects, inspectors and construction monitors often pulling in different directions – some asking for the impossible – others delivering the laughable – and why – because nobody has a clear idea of what is reasonable and how products behave in a fire scenario!

In every country I have worked – there has always been a leading light – a body that drives the market forward and I believe the FPA passive SIG is potentially that light.

There is no quick fix – we have lots of work to do and allot to sort out - but I believe its doable!

What I hope to achieve during my term as passive SIG Chair, is develop a series of guidance documents that will become the industry accepted code of practice.

The FPA guidance notes will be written and prepared by industry professionals, based on data and evidence gathered from home and abroad.

It will be written with all investors in mind, from the designer, builder, supplier, installer, inspector, construction monitor to the IQP – all will work to the guidelines issued by the FPA which will set out what is expected to ensure the highest level of passive fire compliance.

I also have other proposals I'd like to put forward to the passive SIG to help move things forward, such as a web site based list of code compliant passive products, that can be easily accessed to check if a product is fit for purpose.

Training is another huge issue – I believe this can only really be tackled once we start to formulate the FPA guidelines.

Trainers need to be aware what industry requires – not what they choose to promote – we must vet trainers, IQP's and construction monitors to ensure they can prove their independence and industry knowledge.

There is allot of work to do – it won't be easy and some of my proposals might be rejected – but we have to start somewhere and I believe these ideas are positive!

My brief as Passive SIG Chair was quite simple – get things moving – and that's exactly what I intend doing – I can't do it alone – I need involvement from manufacturers, installers, fire engineers, councils, consultants and testing laboratories to help move things along – my goal is to create a fair, safe and level playing field for all and I think that's what most of us would like to see.

There is light at the end of the tunnel and I'm sure others can see it too – if you're interested in joining the Passive Special Interest Group and being a part of the way forward – then please contact Scott at the FPA as we welcome the support.

Paul Ryan

Inspectorate SIG Update

- Author **Jason Godsmark** - Operations Manager, Aon Risk Solutions

Another year just about done and dusted.

It has been an interesting year with some positive developments from MBIE regarding the "Fire Review Program" that are likely to have flow down affects throughout the industry. Currently there are three working groups dealing with issues around Passive Fire Protection, Construction Monitoring and Post Construction Compliance Monitoring. Each has a selection of industry specialists from key stakeholders. While they are all still a while away from producing any fixes it is almost guaranteed that there is likely to be an increase or firming up of processes dealing with these areas.

On a positive note as the Chair of the Construction monitoring group I have noted that the way that the model that is currently used for inspection and certification of sprinkler systems in held in high regard amongst people involved with all sides of the building industry including the BCA's and Fire Engineering Community.

Water management and health and safety are becoming a bigger and bigger part of our daily lives with many of the jobs that we do involving both. TA's and Water authorities are becoming increasingly restrictive in with regards to what can be done when on networks throughout the country, the Tauranga Council are now requiring notice of any high flows from sprinkler systems during a biennial or annual survey in order that they can assess the need to shut valves to protect parts of the network from having the bio film stripped from pipes and causing water quality issues. Currently this is only adding time to the process for biennials in this area and not cost. One change that has brought in a lot of cost and added time to the process has been a tightening of control from water authorities around access to networks for flowing from street hydrants. There is now a complicated process to follow involving permits to access, traffic management plans, potential letter drops and possible after hours requirement depending on the area the testing is carried out in. This has led to a significant increase in costs on average tripling the cost from three years ago. While the costs in some cases may seem excessive the cost of not following these requirement can be even greater with the Water Supply Authorities having the power to hand out fines of up to \$15,000 for unauthorised access to the network.

Another area that has recently come to the attention of the SIG which is likely to have an increase cost which will flow onto the end user is regarding health and safety with regards to flow testing of sprinkler systems on buildings in city centres and other high traffic areas. Auckland Transport have employed a number of inspectors who are monitoring for infractions where work is causing footpaths to be blocked and foot traffic to be diverted. As an industry group we had identified this as a potential problem and we will be approaching AT to come up with an industry solution. Again it is likely to involve increased costs and delays due to permits and traffic management plans and once a solution has been reached your inspectorate company of choice will be able to help with the exact costs and requirements.

Another significant issue arising in Auckland is that the water supply pressures in the older suburbs seem to be reducing. Designers are warned that it is not prudent to design to the wire, with little margin between the supply and demand pressures.

Account Manager, Fire Protection

Industry Training – Fire Protection
Full Time - Auckland

Competenz helps Kiwis build skills, careers and businesses. We develop national qualifications and make it easy to learn on-the-job.

We look after the training needs of nearly 3,500 businesses, helping 20,000 people develop their skills each year. We design and manage qualifications to make sure our workforce is highly skilled. We cover entry level, to advanced technical trades qualifications.

We're seeking an account manager for our Fire Protection sector. You will be responsible for promoting, developing and managing training to customers by working with employers, providers, learners, and key stakeholders to successfully implement competency based training.

This is a fantastic opportunity that may be lead to exposure and development in the engineering sector in the future. Please note the role will require regular travel.

- Minimum 2-3 years' experience in the Fire Protection sector.
- Fire Industry related qualifications and experience would be an advantage.
- Exposure in Education or Learning and Development would be beneficial.
- Proven ability to build and maintain strong relationships with key stakeholders (internal and external).

SUBMIT YOUR APPLICATION

Competenz
SKILLS FOR INDUSTRY

With the close of the year also comes a change to the SIG as with the FPA adopting formalised approach to how the SIG's are run each Chair position will be come available so if you know someone whom you think would be a great fit for any of the SIG chair positions encourage them to put a nomination in to the FPA.

regards, Jason Godsmark

Evacuation Consultants Group Update

Author **Ela Langford** – Evacuation Consultants Group Chair

Greetings to you all.

What an amazing NZ Fire Conference 2016 it has been.

I trust that all of you will have found some worthwhile content and made use of the opportunities provided to connect on a collegial level and share knowledge.

The planning and work that has gone into making such a valuable event running smooth is enormous and I would like to take this opportunity to acknowledge FPANZ and the conference team for their hard work.

Some of you may recall that at the beginning of the year, collectively the Evacuation Consultant Group (SIG) set goals. These highlighted the desire to create greater exposure and awareness of our unique expert-contributions to the industry and wider community. The plan was to develop a communication path that would foster a collaborative approach across the industry.

As a result, plans to present collectively and across industry as part of an expert group to a wider audience eventuated at the NZ Fire Conference 2016.

The presenters consisted of a fire engineer, architect and two evacuation consultants, these sharing their industry expertise interactively with the audience.

Feedback from those that have attended the session has been positive and encouraging.

For all of you that attended I trust you found the experience rewarding and satisfying.

I would also like to thank the audience for their participation. A special thank you also to the panel, Jason King (Fire Engineer), Alby Yap (Architect), Jenny Maxwell (Evacuation Consultant) and Ela Langford, (Fire Safety Trainer & Evacuation Consultant) for their time and contribution on behalf of the SIG.

This has been the first of its kind for us at such forum. It is my hope that this signals a industry readiness's to foster a continuing collaborative approach in relation to evacuation at the early conception stage of a building.

As the year draws to a close I would like to remind you that together we make things happen and achieve great things. This is an important time in our industry and we have the opportunity to reflect on what has been achieved and what still awaits such as the continuing process of the Code of Practice review, and the continuing push for education and improvement of our professional framework as we look and plan ahead.

I would like to thank all my colleagues for their support and input throughout my years as SIG chair, and hope that our momentum continues as we go into 2017.

I wish the new SIG chair Phil Jackson all the best in his new role.

Please all have a very happy Christmas and a safe and prosperous new year.

SIG Chair 2016

Ela Langford

FPANZ Team-Up Calendar

We now have a great new online calendar system for keeping an eye on events that are relevant to our industry and FPANZ.

This can be accessed a number of ways, from our website, or from the link below, or you can even subscribe to the ical links below and your own calendar will be updated with the events and changes if you subscribe to them.

Presently we have four calendars the web address to view them online is:

HOFFE SIG Update

Author **Lance Hunt** – HOFFE SIG Group Chair

Hello to the HOFFE members. December update below.

NZFS & HOFFE Survey

Todd ODonoghue has had a change of responsibilities within the New Zealand Fire Service this will see the HOFFE special interest group will be working with Peter Gallagher who will take up the responsibilities as the National Advisor Fire Risk Management. After talking with Peter at the recent FPANZ Fire Conference he is looking forward to meeting our special interest group, although Peter is Wellington based he will attend and update us through 2017. There will be a meeting early in the New Year were FPANZ, NZFS, MBIE, Insurance & property managers will work on the education process based on the report.

Once again I encourage our membership to read and distribute this report <http://www.fire.org.nz/Research/Published-Reports/Pages/Report148.html>

Worksafe, CTLA, FPANZ Meeting

The SIG group have initiated a meeting with Worksafe and CTLA (Cylinder testing laboratory association) in September and will work through the common issues both parties have. All parties agreed there needs to be more communication we will have a follow up meeting in October to update progress on the points discussed, CO2 valve and cylinder compliance issues there were a number of action points agreed. We have been assured by Kim Comben that we will have Worksafe written response to our questions from back in September this month.

HOFFE Code of Practise & NZS4503

Code of Practice can be sent out for review by members if required. Lance to hear questions from council at next

meeting. Equipment register could be used to provide funding for future updates to the standard. The cost to update standard is between \$100-\$200K. No mechanism in place currently to get funding. Should we amend or rewrite as this effects cost??

HOFFE Special Interest Group Nominations

After 3 years as Chair of the Special Interest group I have resigned the post and would like to thank the support of the membership at all levels. I will still be fully involved in the industry running my own business and will still attend meetings as often as commitments allow.

Halon Update

Programme has been extended. One more shipment out this year and perhaps next year. Advertise the fact in the next newsletter. Can FPANZ issue certificate once we receive the cylinders for the customers? Answer is yes. Receipt only issued once it has been destroyed. Extended until June 2017 still \$43.50 per kilo if a large volume discuss price with Scott Lawson, transportation and collection is unchanged and included in destruction cost.

Commerce Commission & Aero Fire

Peter Simpson from the Commerce Commission and other body/s are helping to potentially stop the likes of AEROFIREs essentially predatory behaviour on what is almost every time, immigrant businesses being targeted by this group. Cases are being investigated. Peter from Commerce Commission to attend our next meeting so have any cases ready (a hand out was supplied to every member). Misleading people and on selling cylinders removed from other customers premises.

WANTED: Technical Sales Professional – Fire and Emergency Products Business: AUCKLAND

Wormald is New Zealand's largest Fire Protection Solutions Company and is part of Johnson Controls International. The Wormald Life Safety and Rescue Products business is looking to engage a Technical Sales professional. This is an ideal opportunity for anyone with an ex-fire fighting background and sales experience.

Our team; markets, demonstrates, sells, commissions and supports a number of specialised fire and emergency products for a variety of industrial, municipal and government customers. Our product range includes the likes of;

- Specialised portable fire pumps for fire fighting
- Fire fighting equipment such as; monitors, nozzles, hose, fittings and adaptors.
- Thermal imaging cameras for fire fighting purposes.
- Fire fighting foam concentrate and associated hardware.
- Specialised lights for emergency vehicles
- Specialised; safety, fire fighting and emergency clothing.
- Breathing apparatus, escape sets, and associated equipment.

The role includes; market development, preparing quotations, selling and post-sales support to existing and new customers. The role offered does involve travel.

This is an excellent opportunity to develop and advance your career in the Fire Protection and Emergency Services industries.

Applicants should have the following attributes;

- A proven record of sales including the ability to "cold call" and promote.
- Either a strong technical background in similar emergency products or "hands on" experience in the use of such products i.e. ex- Fire Fighter
- Be a self-motivated TEAM player with good customer skills and excellent integrity.
- Have excellent time management, attention to detail and clear communication skills will see you accurately deliver high quality work and develop long lasting client relationships.

You will have relevant working rights to be employed in New Zealand, a stable work history and the ability to provide positive work related references.

If you have a good knowledge of such products and you can work effectively without supervision and you have excellent customer service skills, we encourage you to apply now! **For more information or to apply please send your CV and cover letter to HR/Recruitment at: bsanghani@tycoint.com by the close of business 20th of December.**

A tyco Business

The Importance of Component Limits

Author **Stephen Ridder** | Fire Protection Consultant, Aon New Zealand

When designing any mechanical system all the components and parts that make up that system have a performance limit. A sprinkler system is no different and as a collection of numerous components the designer and site supervisor need to remain cognizant of the intended performance parameters that the system will operate under and the parameters of the components they are using in making up the sprinkler system.

Common limits that contractors need to pay attention to are:-

- Temperature ratings of sprinkler heads Vs the environmental conditions
- Load limits of fixings
- Load limits of hanger and brace components
- Pressure limits of pipe and fittings
- Pressure limits of valves, pumps and other auxiliary components

While NZS4541 may specify maximum limits these are maximum limits and it remains the responsibility of those selecting products to confirm that all products are being used within both the limits of the manufactures data and the limits of the Standard. One good example is the standard specifies a maximum allowable spacing between seismic braces but that assumes the contractors selects all components that comprise a brace system are rated for the necessary load imposed.

As the range of products in the market place and solutions continues expand designers and supervisors need to remain aware of the requirements within our industry to deliver quality installations for the success of the whole system may be resting on the performance of a 5 cent part. It is worth quoting a single sentence from the foreword to NZS4541:2013 *"The importance of detail cannot be over-emphasised"*

Fire Programme winds down for 2016, next phase nears

MINISTRY OF BUSINESS,
INNOVATION & EMPLOYMENT
HĪKINA WHAKATUTUKI

Author **Alastair MacKay** | Programme Manager, Ministry of Business, Innovation & Employment

As 2016 draws to a close, I'd like to take the opportunity to thank you for your involvement in what has been an extremely busy and productive year for the MBIE Fire Programme. Since launching in July 2015, the Fire Programme has covered a great deal of ground across various issues to develop solutions for improving the fire regulatory system. I'm pleased to report this work is now close to completion and we'll soon be into the next phase of the programme, which will be to put out a package of proposals for public consultation next year.

Our focus now is on reviewing all the documentation from the various workstreams before we finalise proposals to consult on. This will include Alternative Solutions, Acceptable Solutions and Verification Methods, Internal Surface Finishes, Structural Performance in Fire and Supported Housing. A number of other areas which we've started will be progressed next year, with a wider perspective beyond fire. We'll keep you posted about the expected timing of the consultation closer to release in early 2017.

Internally, we recently farewelled Chris Rutledge as Programme Manager, from whom I took over. We thank

Chris for his contribution in helping launch the Fire Programme and progressing it to where it's at today. We also welcomed on board Dave McGuigan, MBIE's Deputy Chief Engineer, as project sponsor.

Support from the sector has been critical to the progress we've made on the Fire Programme. We've had excellent support from stakeholders, with more than 85 people actively engaged on 10 project working groups. Also, I'd like to extend a special thank you to our external working group chairs.

Once again, I'd like to thank you all for your commitment to the Fire Programme this year – we couldn't have got to where we are today without your input. We look forward to your continued support during the next phase of the programme as we work towards landing on solutions for improving the fire regulatory system that will ultimately benefit everyone in New Zealand.

We wish you all a merry Christmas and relaxing summer break. See you in 2017!

MEDIA RELEASE

Competenz, FPA New Zealand and FPA Australia enters into major training partnership

Competenz are transforming the way the New Zealand fire industry learn with help from the Fire Protection Association Australia (FPA Australia) and Fire Protection Association New Zealand (FPANZ). The partnership will help deliver best practice industry training to the industry through the development of an online learning solution.

The three parties have committed to working together to share learning content, to support consistency of training between the two countries and enable shared savings in resource development costs.

Specifically, the partnership will allow learning resources developed by FPA Australia to be modified for the New Zealand market and then delivered online by Competenz, supported by FPANZ.

Competenz General Manager Product Development and Quality Assurance Nick Thomson said he hoped to make the new learning materials available to the New Zealand fire protection industry in 2017.

"FPA Australia will shortly provide their learning materials to help inform our development of the new online programmes," he said.

Competenz has assembled a team to transition the content from the Australian context. Once these materials have been adapted to meet the New Zealand requirements, we will be making announcements about the availability of these qualifications."

"These materials have been sorely needed in the New Zealand market for some time and we look

forward to offering them to learners and ensuring the best possible learning materials are developed for this critically important industry."

FPA Australia CEO Scott Williams said the move would lead to more consistent educational outcomes for learners in New Zealand and Australia.

"Our vision is reducing the risk of fire to life property and the environment, for a safer community and this agreement goes a long way towards achieving this," he said.

"This partnership will ensure that best practice fire protection industry training can be conveniently delivered to learners in New Zealand and this will greatly increase the portability of skills as individuals move between our two countries."

Scott Lawson, FPANZ Executive Director said the agreement paved the way for closer ties between all the organisations in the future.

"This initiative is just the start of a strong partnership between our organisations to ensure we can continue to deliver for our members and the broader fire protection industry," he said.

"By sharing resources and costs, all learners will benefit and we know we are delivering the best quality industry training available. FPA Australia should be congratulated on the quality of their training materials, which are world class, and we are delighted to be able to access them."

More information about each of the partner organisations is available from their websites:

www.fireprotection.org.nz

www.fpaa.com.au

www.competenz.org.nz

Count us in.

FPANZ and n3 have teamed up to give your business and your employees amazing discounts at New Zealand's leading suppliers.

n3 is a business buying network with **over 12,000 members**.

They are dedicated to making it simple for kiwi businesses to save money across all areas of day-to-day business.

Plus, your n3 membership fee is fully covered by FPANZ,

so you won't need to pay a thing.

Ways to Trade with n3:

On Account

On Account spend gives you the best discount rates and simplifies your business purchasing by avoiding the need to pay cash. On account purchases are conveniently invoiced directly from the suppliers.

Trade Card

The n3 Trade Card is perfect for last-minute in-store cash purchases. Simply show your n3 Trade Card in-store to instantly access supplier discounts.

Employee Benefits

A great way to reward your hard working staff - we can provide discounts to your employees from some of our suppliers for their personal purchases.

Getting started:

1

Activate

Fill out form on reverse or visit assoc.n3.co.nz/FPANZ

2

Choose Suppliers

Visit www.n3.co.nz or select from recommended suppliers on reverse

3

Trade + Save

Trade with suppliers and cut business costs

Got a question. Get in touch.

0508 20 30 40 | ask@n3.co.nz | n3.co.nz

To activate your n3 Membership

Please complete the form to activate your n3 membership, open Supplier Accounts or order n3 Trade Cards. Return it by email: ask@n3.co.nz or fax: **09 917 4034** or you can do it online: assoc.n3.co.nz/FPANZ. We look forward to hearing from you.

- **No annual card fee.**
- **No transaction fees.**

A vehicle consuming 100 litres per week using the Fire Protection Association discount of 10 cents per litre = \$10 discount per week

Total Discount = \$520
(52 weeks x \$10 per week)
including GST

For a company fleet of 10 vehicles that's an annual saving of \$5,200 per annum.

To secure this great offer or for further information, please contact:
